

Aashik Ilangovan

(587) 891 – 9667 | aashikilangovan@gmail.com | linkedin.com/in/aashiki | aashikilangovan.github.io

Summary

Software Engineer with business analysis and data-driven problem-solving experience gained through enterprise software development, operational optimization projects, and a Master of Management degree. Experienced in gathering requirements, analyzing business processes, translating stakeholder needs into technical solutions, and delivering technology-enabled improvements in Agile environments.

Skills

Data & Analytics: SQL, PostgreSQL, MySQL, Oracle Database, MongoDB, Excel (PivotTables, VLOOKUP, VBA), Tableau, Power BI

Business & Systems Analysis: Requirements Gathering, User Stories, Business Process Analysis, Process Mapping, Stakeholder Management, Agile/Scrum, BPMN

Technical Skills: Java, Python, C++, C#, JavaScript, TypeScript, React, Next.js, Node.js, Express.js, HTML/CSS, .NET Framework

Tools & Platforms: AWS (Certified Cloud Practitioner), Docker, Git, Postman, Selenium, JUnit, Figma

Education

MASTER OF MANAGEMENT | *UNIVERSITY OF CALGARY* AUG. 2025 – APR. 2026

BACHELOR OF SCIENCE IN SOFTWARE ENGINEERING | *UNIVERSITY OF CALGARY* JUN. 2025

- Minor in Entrepreneurship & Enterprise

Professional Experience

JUNIOR SOFTWARE ENGINEER | *U TECHNOLOGY CORP.* MAY. 2026 – AUG. 2026

- Developing a full-stack specification management platform that digitizes operational workflows and improves data consistency, traceability, and structured decision-making
- Designing reusable data models, workflow logic, and templates to support scalable document generation, storage, and approval processes (**Next.js, React, PostgreSQL, TypeScript**)
- Building system functionality across frontend, backend, and database layers to support structured data capture and workflow-based reporting
- Collaborating with engineering and marketing stakeholders in an Agile environment to gather requirements, prioritize features, and deliver iterative system improvements
- Contributing to application architecture, testing, documentation, and AWS deployment planning to support scalable, production-ready systems

SYSTEMS DEVELOPER STUDENT | *CANADIAN NATURAL RESOURCES LTD.* JAN. 2023 – AUG. 2023

- Collaborated within an Agile development team to gather requirements, refine backlog items, and implement system enhancements supporting enterprise information workflows
- Translated business needs into functional system requirements, improving alignment between technical solutions and operational workflows
- Analyzed existing business processes and identified inefficiencies, contributing to ~30% improvement in system performance and decision-making speed
- Developed and automated Excel-based reporting tools (PivotTables, VLOOKUP, VBA), improving data accuracy and reducing manual reporting effort
- Performed data extraction, validation, and analysis using SQL and Oracle databases to support reporting accuracy and business decision-making.

- Presented requirements-driven system improvements and process recommendations to technical and business stakeholders to support decision-making and system adoption.

Industry Projects

WAREHOUSE OPTIMIZATION & INVENTORY ANALYSIS | U TECHNOLOGY JAN. 2026 – APR. 2026

- Conducted business process analysis on warehouse operations (27,000 sq. ft., ~455,000 items) to identify inefficiencies in inventory flow, space utilization, and retrieval performance
- Benchmarked industry practices (Amazon, IKEA, Zara, DHL) to identify best-fit operational models for inventory optimization and system design.
- Developed a data-driven inventory optimization strategy using location-based inventory logic and frequency-based slotting to improve operational efficiency and retrieval accuracy
- Designed standardized inventory classification and location coding system aligned with ERP principles to improve data consistency and traceability
- Created process maps, layout models, and structured documentation supporting future digital transformation and ERP/WMS integration

RETAIL BUSINESS SOLUTION | WAH-HING MEAT SHOP SEP. 2023 – MAY 2024

- Acted as Project Manager for a 6-person team, coordinating deliverables, leading stakeholder communications, and securing **100% sponsor approval** on final solution
- Conducted stakeholder interviews and requirements elicitation sessions to inform system design, workflow improvements, and UI/UX decisions
- Translated business requirements into digital strategy and technical specifications, integrated APIs and managed back-end systems to ensure reliable system performance
- Produced clear documentation and training resources to support long-term sponsor adoption, scalability, and knowledge transfer

Utilized: React, Node.js, Express.js, MongoDB, Docker, Tableau, Figma

Selected Academic Project(s) & Coursework – University of Calgary

UNIFIED MEDIA EXPERIENCE PLATFORM DESIGN | IT FOR VALUE INNOVATION

- Designed a unified digital prototype aggregating multiple media sources (audio, video, streaming, YouTube, TV) into a single user experience hub
- Developed BPMN process models and customer journey maps to analyze existing workflows and identify opportunities for process improvement
- Mapped AS-IS and TO-BE customer journeys to identify and reduce friction in fragmented media consumption workflows
- Developed BPMN process models to analyze and redesign user interaction flows, reducing cross-platform switching effort
- Built low-fidelity and no-code prototypes and validated usability through iterative user testing and feedback
- Defined product requirements and success metrics, translating user pain points into improved navigation, interaction design, and performance indicators

Extra-Curricular Activities:

- Participated in Calgary Hacks Hackathon in 2021, 2022, 2023 developing simulators,
- Volunteered for Diabetes Canada raising funds and spreading awareness
